

Eloy Cheng| Bachelor | Suzhou, China

Target Role: AI Application Engineer / Python Developer / Backend Engineer

Expected Salary: Negotiable | **Phone:** +86 187 5859 1575 | **Email:** 1903210236@qq.com

EDUCATION

- Zhejiang International Studies University (ZISU) – Hangzhou, China *B.A. in Business Analysis (English-taught)* | 2016 – 2022
- *Military Service:* 2018 – 2020 (honorable discharge, integrated into degree timeline)

PROFESSIONAL SUMMARY

- 5+ years of combined experience in backend development and data engineering across finance, IoT, smart manufacturing, and AI applications. Full-stack proficiency from data ingestion, ETL, and AI-powered analytics to visualization.
- Skilled in building robust multi-agent systems with LangGraph and leveraging LLMs for complex automation.
- Strong cross-functional communication skills (fluent English) and project delivery track record in foreign-invested enterprises.

WORK EXPERIENCE

Luming Robot Co., Ltd. – Suzhou | Full-Stack Developer (Apr 2026 – Present)

- Built a multi-agent workflow using LangGraph with intent-recognition and execution-separation architecture; implemented a fallback routing mechanism (keyword + semantic similarity) to mitigate LLM output instability.
- Developed frontend/backend microservices for the company's e-commerce platform using FastAPI and TypeScript; contributed to internal inventory system upgrades.
- Utilised Docker for local environment setup and Nuitka for Python bytecode protection.

Lingyu Electronics Technology Co., Ltd. – Suzhou | Digitalization Engineer (Sep 2024 – Mar 2026)

- Designed and deployed an LLM-powered report automation agent that autonomously queries databases and generates Word reports (tables, charts, text), replacing manual reporting and boosting efficiency significantly (demo: 101.43.113.117:8000 | GitHub: github.com/Eloysday/auto_model_filldel_fill).
- Validated OCR solutions (PaddleOCR/Tesseract) to extract structured data from paper forms and device screenshots, enabling integration into the automated reporting pipeline.
- Built real-time factory monitoring dashboards with Python + QuickBI/PowerBI; authored Shell scripts for server patrol and data synchronization.

Fujitsu System Engineering Co., Ltd. – Suzhou | Data Project Engineer (Jun 2022 – Jun 2024)

- Processed IoT (Internet of Vehicles) data: performed anomaly detection, cleansing, and in-depth analysis, and documented best practices.
- Managed Azure cloud servers and Linux systems; deployed crontab-based monitoring scripts for real-time alerting and automated report delivery, ensuring zero-downtime operations.
- Led cross-team collaboration, standardized SOPs, and successfully delivered enterprise-level data projects for foreign clients.

Personal Projects

Agentic RAG Intelligent Retrieval System

Built a full-cycle Agentic RAG system with LlamaIndex covering document parsing, hybrid retrieval, reranking and web search integration.

- Supports PDF/DOCX/TXT parsing, sliding-window chunking, BGE-Small embedding and ChromaDB incremental storage via MD5 hash.
- Implemented hybrid retrieval: weighted fusion of embedding semantic search (0.6) and BM25 keyword search, refined via BGE CrossEncoder reranker.
- LLM-driven autonomous loop: query rewriting, self-reflection relevance evaluation, auto re-retrieval & web search; compatible with DeepSeek & Qwen models.
- Optimized retrieval speed & hit rate via ThreadPoolExecutor parallel multi-query fetching.

High-Concurrency Stock Crawler

- Decoupled request and storage with message queues and multi-process architecture. Automatically crawls over 5,000 stock entries within 30 seconds, covering crawling, cleaning, database storage and scheduled updates. Supports offline analysis of 20+ financial metrics and data visualization for trading decisions.

Technical Skills

- AI Development: LangGraph multi-agent orchestration, Prompt engineering, Function Calling, LLM memory management, LLM API integration
- Python Backend: FastAPI, RBAC permission design, async/multithreading, Pandas data processing, PaddleOCR
- Data Engineering: Python ETL, MySQL performance tuning
- DevOps & OS: Docker containerization, CI/CD, Linux administration (RHCSA certified), Shell scripting
- Cloud & Network: Ubuntu cloud operation, CCNP candidate
- Language: TEM-4 & CET-6, fluent English for daily work
